Our value proposition

Maximize the operational continuity of manufacturing companies and critical infrastructures through:

1. Industrial software maintenance.
2. Industrial cybersecurity awareness and remediation.
3. Data analytics for informed decision making.
4. Production/Quality optimization projects.
5. Custom software development.

We offer specialized engineering services in the U.S.A and Latin America.

Industrial Data Analytics

Through descriptive/prescriptive analytics we present, in real time, the information required in the industrial environment for informed decision making.

Software Development

Development, optimization and maintenance of desktop/web/mobile applications, according to the needs of our clients. We provide competent developers who use collaborative processes and agile methodologies.

Maintenance of Industrial Applications

We support operational continuity for critical infrastructures and manufacturing companies through preventive and corrective maintenance services for the installed base of HMI / SCADA / Historians / MES / Batch.

Alarm Management
